## 螺旋旋转鼓格栅

BOG -S Spiral Drum Grille

### 产品简介 / PRODUCT DESCRIPTION

BOG-S型机械格栅是一种集细格栅除污机、栅渣螺旋提升机和栅渣螺旋压榨机于一体的设备。是城市污水处理厂和工业废水处理过程中将水中漂浮物质、沉降物质及悬浮物质分离取出的理想设备，广泛用于城市生活污水厂、工业废水处理工程的固液分离、滤渣清洗、传输及压榨脱水。

BOG-S mechanical grille is a kind of equipment which integrates fine screen remover, grille slag spiral elevator and grille slag spiral squeezer. It is main function to separate floating substances, settling substances and suspended substances from water, which is widely used in solid-liquid separation, residue cleaning, conveying and squeezing dewatering in urban sewage treatment and industrial wastewater treatment systems.

### 设备特点 / CHARACTERISTICS

01

设备运行时有自清洗功能，不会堵塞。  
Self-cleaning system without block of the grilles.

03

作用面积大，水头损失小，分离效率高，处理量大。  
Large area and small head loss, high separation efficiency and large capacity.

05

设备可实现全自动控制，运转平稳、噪音低、能耗小。  
Equipment can realizes automatic control, stable operation, low noise and low energy consumption.

02

清渣彻底，封闭式输送，对环境无污染。  
Slag cleaning thoroughly, close transportation and no pollution to the environment.

04

过水流量表。  
Model and Capacity.

06

集多种功能于一体，结构紧凑，占地面积小，易于安装和维护，使用寿命长。  
Compact structure integrates multi functions, space saving, easy installation and maintenance, and long service life.

### 结构与工作原理 / STRUCTURE AND WORKING PRINCIPLE

该设备的格栅片按栅间隙制成鼓形栅筐，与水平面呈35°安装在水渠中，处理水从格栅端头栅框内，栅渣被截留在栅框内表面，安装在中心轴上的齿形刮板由电机驱动进行回转清污，当清渣刮板把污物扒集至栅筐顶点的位置时(时钟12点)，靠重力下落的栅渣落入栅渣槽；栅渣由槽底螺旋输送器提升至上部压榨段压榨脱水后由卸料口排出外运处理。

The grille pieces are made into drum shaped grille basket according to the grille gap, which installed in the ditch at 35 ° to the horizontal surface. Raw water filled into the grille basket, and slags are intercepted on the inner surface. The tooth scraper installed on the central shaft is driven by the motor for rotary cleaning. When the cleaning scraper picks up the slags to the top of the grille basket (clock 12 o'clock), slags will fall into the slag tank by gravity. The screw conveyor lift slags from the tank to the upper part for squeezing dewatering, finally discharge the slags from the discharge port.
